

## ORACLE WEBCENTER CONTENT

SIMPLE, SMART & SCALABLE ECM

### KEY FEATURES

- Single, Unified, Enterprise-Class Content Management Platform
- Core Content Services – version control, security, indexing & search, metadata, workflow engine, replication
- Document Management
- Web Content Publishing
- Digital Asset Management
- Document Imaging
- Records and Retention Management
- Archiving & File Store Management
- FDA 21 CFR Part 11 Compliance
- DoD 5015.2 v. 3 Certified Records & Retention Management

### KEY BENEFITS

- *Reduce Costs* – convert paper-based documents to digital and manage all unstructured content in one system
- *Gain Efficiencies* – with a single source of truth, streamlined business processes, and easier access to content across the organization
- *Reduce Risks* – improve consistency and auditability, comply with business policies & regulations, and ensure content security
- *Create Value* – improve business agility and optimize revenue by leveraging content across applications, business processes and departments

*Oracle WebCenter Content provides the most complete, open, and integrated enterprise content management (ECM) platform – allowing you to consolidate unstructured content on a low-cost, flexible content management system while ‘content-enabling’ business processes throughout your organization. By better managing content as a strategic asset and integrating content into enterprise applications and business processes, Oracle WebCenter Content helps you lower costs and reduce risks while improving business productivity and agility.*

### Is Your Unstructured Content a Strategic Asset?

Today, enterprises are seeing unprecedented growth in the amount of unstructured content – documents, reports, presentations, images, audio and video files – created and used throughout the organization. Better managing and gaining insight from this growing amount of information is a key business challenge organizations face today. And while we’d like to think that all content nowadays is electronic, many organizations are still dealing with huge volumes of paper-based documents. How is all this information managed within your organization today?

- Do you have multiple content silos that result in duplicate content, out-of-date content, and inaccessible content?
- Is your content being fully leveraged across applications, processes and departments?
- Do you have a strategy for consolidating your unstructured content to reduce costs and infrastructure complexity?
- Are you able to comply with regulations and manage the risks associated with your growing volume of unstructured content?

### A Simple, Smart and Scalable Content Infrastructure

Forward-looking organizations are moving towards centralizing all their unstructured content on a single, scalable content management platform. This enables them to reduce costs by simplifying their ECM infrastructure, reusing customizations and processes, and concentrating skill sets. Additionally, with a single platform for all enterprise content, IT organizations can ensure a consistent approach to up-time & SLAs, back-up and recovery, records and retention policies, security policies, and patches and upgrades.

With its comprehensive content management capabilities, Oracle WebCenter Content is the ideal platform for centralizing your unstructured content and better managing the entire content lifecycle from creation to disposition. Oracle WebCenter Content is:

- **Simple** – A single, unified content management platform designed to work with your existing IT infrastructure and pre-integrated with enterprise applications.
- **Smart** – Manage all your unstructured content, from documents to video files, in one

place and leverage all the advanced capabilities of the Oracle WebCenter Content platform including document imaging, business process management, and records and retention management.

- Scalable – A high-performance ECM platform that can grow with your organization to easily manage billions of content items and support hundreds of thousands of users.

**Content-Enabling Business Applications**

Enterprise applications, such as ERP and CRM systems, help streamline business processes such as service requests, invoice processing, and expense management. In many cases, when users interact with these applications, unstructured content starts the process, is attached to the process for reference, or is the end-result of a process. Yet, this unstructured content is often disconnected from the application – making it more difficult to access, reuse, share, secure, and audit. Oracle WebCenter Content has out-of-the-box application adapters that integrate with popular business applications and provide seamless access to unstructured content directly from within the application’s user interface. These pre-integrated solutions allow you to leverage the enterprise-class content management capabilities of Oracle WebCenter Content without requiring business users to jump between applications.

**A Single Platform for All Your Content Management Needs**

Whether you’re moving towards a centralized ECM infrastructure and looking for a strategic vendor, or you want a flexible system that addresses a specific content management use case, Oracle WebCenter Content provides the feature-rich ECM capabilities and out-of-the-box integrations to meet all your needs.

Capabilities of Oracle WebCenter Content include:		
• Document Management	• Digital Asset Management	• Records & Retention Management
• Web Content Publishing	• Document Imaging	• Case Management
• Employee On-Boarding	• Automating Accounts Payable	• Automating Claims Processing

**Oracle WebCenter Content - Your Strategic ECM Platform**

Oracle WebCenter Content realizes the vision that content management is a core component of today’s enterprise infrastructure - a centralized but open platform that empowers employees and content-enables business processes throughout the enterprise. Oracle WebCenter Content consolidates unstructured content from across diverse systems so it can be centrally managed and then exposes it from within desktop productivity tools and business applications to drive productivity and business process efficiencies.

 Oracle is committed to developing practices and products that help protect the environment
